Sophos Central Endpoint and Server Protection: Engineer Course Overview

This course is designed for technical professionals who will be demonstrating Sophos Central Endpoint and Server protection. It provides an overview of the protection Sophos Central provides to endpoints and serves including major capabilities and core configuration concepts.

The course is available either online via the Partner Portal, or as an instructor-led classroom course. Please contact your CAM or CAE to find out more about the availability of classroom courses in your region.

The course consists of five presentations that form the complete course. Electronic copies of the supporting documents for the course will be provided to each trainee through the online portal. The course is expected to take 8 hours to complete. Roughly 4 hours of this course consists of practical labs and simulations.

Objectives

On completion of this course, trainees will be able to:

‣ Understand how Sophos Central Endpoint and Server Protection helps protect against security threats
‣ Complete common configuration tasks
‣ Demonstrate commonly used features
‣ Perform basic troubleshooting

Prerequisites

Prior to taking this course, trainees should have completed and passed the Sophos Central Overview – Certified Engineer Course.

Certification

To complete the course, trainees must take and pass an online assessment. The assessment tests their knowledge of the presented content. The pass mark for the assessment is 80%, and is limited to 4 attempts. Trainees should note that to register for the Sophos Central Architect course, they must complete and pass this course.
